

Newton Phoenix Fund

Fourth quarter 2009

Fund information

Aim

To achieve long-term growth in excess of cash returns from a balanced portfolio diversified across a range of assets. The Fund is intended to have significantly lower absolute volatility than traditional equity biased funds, but will exhibit volatility relative to its benchmark.

All performance sourced from: Lipper, WM, ARC & Datastream, as at 31 December 2009. Calculation basis: Sterling, total return, bid to bid, without initial charges, net income reinvested, net of management fees.

Risk factors

This is a financial promotion and is not intended as investment advice. Past performance is not a guide to future returns. The value of investments and the income from them can fall as well as rise and investors may not get back the original amount invested. The value of overseas securities will be influenced by fluctuations in exchange rates. If the portfolio invests in sub-investment grade bonds that typically have a low credit rating these carry a high degree of default risk, which can affect the capital value of your investment. If the portfolio has exposure to hedge funds, gold, private equity and property via publicly quoted transferable securities, there are additional risks associated with these sectors.

Newton's themes

Newton is a global thematic stock picking company. Our style is team oriented and relies on effective communication between all of our investment personnel. Two of our themes are listed below, along with examples of individual holdings.

All Change

Factors

The previously benign period of stable growth, low inflation, and easy credit, which allowed private sector debt and financial leverage to grow to unsustainable levels (as described in a previous theme, "Becalmed") has come to an end. When assessing investments we assume that access to credit will remain difficult, which favours companies with limited financing requirements and argues against exposure to highly-indebted customers.

Investments

BP, GlaxoSmithKline, Roche, Vodafone

Developing Economies

Factors

The influence of the developing world on the global economy continues to grow, and developing economies ultimately are on a convergence course, in terms of demographics and consumption trends, with the industrialised world. This long-term secular trend will depend on the development of Western-style health and social security systems and will involve significant cyclical influences as well as frictions regarding trade policies.
