

# Newton Balanced Bridge Fund

Second quarter 2010

## Fund information

### Aim

To achieve income and capital growth over the long term through a portfolio that is predominantly invested in equities, across a wide range of industries and countries. The equity element is balanced by cash, bonds and exposure to alternative assets, such as hedge funds, to reduce the overall volatility of the portfolio.

The fund is managed in line with the Newton Private Investment Management Income and Growth Model. The central asset allocation for the model is 60% invested in global equities and 40% invested in other asset classes which may include bonds, cash, hedge funds, structured products and property.

Newton Balanced Bridge	16.5%	14.9%	-1.2%	-19.4%	18.1%

\* See over page for benchmark details. All performance sourced from: Lipper, WM, ARC & Datastream, as at 30 June 2010. Calculation basis: Sterling, total return, bid to bid, without initial charges, net income reinvested, net of management fees.

### Risk factors

This is a financial promotion and is not intended as investment advice. Past performance is not a guide to future returns. The value of investments and the income from them can fall as well as rise and investors may not get back the original amount invested. The value of overseas securities will be influenced by fluctuations in exchange rates. If the portfolio invests in sub-investment grade bonds that typically have a low credit rating these carry a high degree of default risk, which can affect the capital value of your investment. If the portfolio has exposure to hedge funds, gold, private equity and property via publicly quoted transferable securities, there are additional risks associated with these sectors.

## Newton's themes

Newton is a global thematic stock picking company. Our style is team oriented and relies on effective communication between all of our investment personnel. Two of our themes are listed below, along with examples of individual holdings.

## All Change

### Factors

The popping of the credit bubble has marked an end to the era of rapid growth in private sector debt in the developed world. Structurally impaired financial systems and impending regulatory burdens ensure that credit will be less freely available, and this has profound implications for consumer-driven economies, all asset classes and investment strategies.

### Investments

AMP, Barrick Gold, GSK, Jardine Lloyd Thompson, Newcrest Mining, Novartis

## Developing Economies

### Factors

The influence of the developing world on the global economy continues to grow, and developing economies ultimately are on a convergence course, in terms of demographics and consumption trends, with the industrialised world. This long-term secular trend will entail the development of Western-style health and social security systems and will involve significant cyclical influences as well as frictions regarding trade policies.

## Long-term performance - risk and reward

### Fund return and volatility since launch

This chart shows both return and volatility. The Newton Balanced Bridge Fund has given a higher return than cash, world equities and the benchmark with slightly higher volatility than that of the benchmark. The launch date of the fund was 23 December 1998.

Source: Lipper, WM & Datastream, as at 30 June 2010. Calculation basis: Sterling, total return, bid to bid, without initial charges, net income reinvested, net of management fees.

\*The benchmark to 31 March 2009 was WM PCI Balanced. Thereafter it is the Newton Balanced Composite. The Newton Balanced Composite benchmark comprises 40% FTSE All Share, 20% FTSE World ex UK, 15% FTA Govt All Stocks, 15% ML Sterling Non-Gilts & 10% 1 month £ LIBOR.
