

## Objective

The investment objective of the Scheme is to achieve capital growth through investment principally in UK and international securities. The Scheme may also invest in warrants, deposits, money market instruments, collective investment schemes, derivative instruments and forward transactions.

## Investment Philosophy

Over the long term the total return from equities has normally beaten cash and bonds by a significant margin: the major part of the Fund is therefore invested in equities. The bias is towards UK quoted shares balanced by international exposure and fixed interest holdings.

The benchmark is the WM Private Client Growth Indicator.

## Risk Factors

Past performance is not a guide to future returns. The value of investments and the income from them can fall as well as rise and investors may not get back the original amount invested. The value of overseas securities will be influenced by fluctuations in exchange rates. If the portfolio invests in sub-investment grade bonds that typically have a low credit rating these carry a high degree of default risk, which can affect the capital value of your investment. If the portfolio has exposure to hedge funds, gold, private equity and property via publicly quoted transferable securities, there are additional risks associated with these sectors.

## Investment Themes

The identification of global themes is a key component in our investment strategy. Some of the themes that we are currently following in this portfolio are illustrated here as well as examples of individual holdings.

## Population Dynamics

A nation's demographic profile has profound implications for its ongoing economic development influencing its patterns of growth, consumption and savings, fiscal policy, healthcare regimes and competitive advantage. Industrialised economies have broadly ageing populations while some developing economies have significantly different profiles.

**Beneficiaries:** Allianz, GlaxoSmithKline, Novartis, Prudential, Smith & Nephew

## Global Realignment

Stronger growth and the increasing economic influence of the developing world is challenging the western industrialised nations' domination in terms of wealth, consumption of both natural resources and finished goods and market capitalisation of global stock markets. Some realignment over time is inevitable reflecting the developing world's accumulation of foreign exchange reserves and trade surpluses.
